

TECHNICAL DATA SHEET

Petrol injection system cleaner

Art. no. 5861 111 303

P. Qty.: 1 / 12

For cleaning the injection system

- Binds and neutralises acidic condensation water
- Protects the fuel system from corrosion
- Removes resin- and paint-like deposits in the micro range on injection valves and on the fuel distributor
- Ensures precise controlling of injection valves
- Less fuel is used thanks to precise fuel injection and misting

Contents	300 ml
Colour	Colourless
Smell/fragrance	Solvent-like
Chemical basis	Naphtha
Shelf life from production	24 Month
Density	0.8 g/cm ³
Density conditions	at 20 °C
Min. flashing point	30 °C

Application area

- In case of increased fuel consumption due to poor fuel injection
- Can be used for preventative maintenance at every inspection
- For all petrol injection engines with and without a catalytic converter
- In case of rough engine running

Application information

Empty the contents of the can into the fuel tank. Ideal dosage: 1 can to 50 litres of fuel.

This product is subject to the provisions of the German Chemicals Prohibition Ordinance. Detailed information on the hazards arising from this product, the precautionary steps to be taken during proper use, dealing with spillages or other exposure and ensuring correct disposal can be found in the safety data sheet.
